Newborn Circumcision

Newborn Circumcisions will now be done on an **outpatient basis only**.

There are currently two doctors available to perform the procedure, **out of their own offices**.

There are two different methods of circumcision available; Plastibell and Mogen Clamp. Please ask your nurse for further information regarding the two procedures and which method you would prefer.

To book your circumcision, please contact the physician's office directly:

Dr. Gill – Plastibell Method: 519-881-1278

Dr. Hubbs – Mogen Clamp: 519-507-3734

Total cost for the procedure is \$300.00. Payment methods can be arranged through the individual physicians' offices.

Circumcision Preparation Instructions

If you wish to bathe your baby, you may do this in advance of the appointment as you will not be able to bath the baby for 24 hours after the appointment to prevent any risk of bleeding following the circumcision.

Please nurse/feed your baby prior to beginning the circumcision prep.

Approximately 1 hour before the circumcision appointment time, please do the following:

1. Give your baby 0.5ml of Infant Tylenol
2. Place Emla numbing cream generously around the base of the penis.

You may also use a small amount of plastic-wrap around the penis to hold the cream in place.

You may purchase the Tylenol and Emla Cream from your local pharmacy in advance of the appointment day.
